

We have always been proud investors in people who contribute to making RMG a solid and internationally recognised entrepreneurship player.

Striking a balance between **product** and **people** is our daily commitment, a task we take very seriously. A task accomplished by entering long-term trust-based relationships and collaboration with our customers and suppliers, by supporting and enhancing our team as well as, not least, protecting the environment and the community in order to safeguard its future.

This harmony makes us a reliable partner in the field in terms of **quality**, **innovation** and **ethics**.

2004

from father to son

Passion and knowledge have been handed down over generations: Andrea's grandchildren joined the company at the beginning of the third millennium, bringing new thoughts and ideas to the road paved by their grandfather about forty years earlier.

2009

internationalisation

In its constant commitment to sustainable products, RMG decided to introduce its made in Italy products to the international market as well.

2021

coexistence of past, present and future

Despite the 2009 economic crisis and the 2020 health crisis, the second and third generation of the Guizzi family continue to innovate and improve production processes, preparing to celebrate the company's 60th anniversary.

COMPANY PROFILE • EN

Built on human expertise

ABOUT US

Italian quality. International presence.

We are an Italian family-run company operating in the field of metal recovery. Our history is rooted in **passion** and **dedication to work**.

1961

year of foundation

Andrea Guizzi started its copper-based alloy production in the province of Brescia. His knowledge as chemical expert, the work skills acquired in the metallurgical industry and, not less important, his commitment and dedication are at the foundation of RMG.

1973

growth in size and human skills

In just over a decade, the company has grown both in size and in human-wise. The second generation of the Guizzi family joined the company: first Fausto, current CEO, followed by all his siblings.

1989

Andrea's legacy

Andrea died suddenly in the peak of his strength. His children decided to continue his entrepreneurial way of thinking: to offer a quality product, always with a keen eye to social and environmental responsibility.

PRODOTTI

Our activity consists in the **production of copper-based alloy ingots**: tin bronze, aluminium bronze, manganese brass and special alloys.

The **production cycle** begins with the procurement of raw materials and scrap deriving from production waste and dismantling of plants.

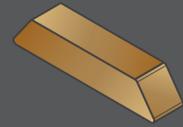

We manufacture **copper-based alloy ingots** in compliance with the main regulations of the industry, always updated to the latest version: **UNI EN 1982, ASTM B30, JIS H 2202**. Furthermore, we also produce **custom-made products**. Thanks to our experience and to the deep knowledge of refining techniques, we produce ingots with a high metal yield.

OUR MAIN PRODUCTS

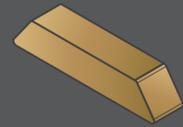

BRONZE

weight of single ingot approx. 15 kg
production with gas-fired rotary furnace

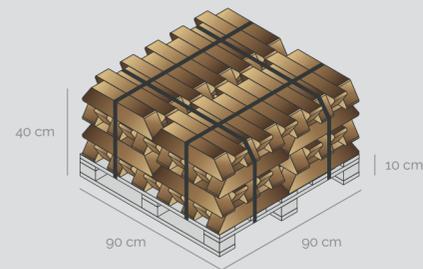

ALUMINIUM BRONZE

weight of single ingot approx. 13 kg
production with electric induction furnace

BRASS

weight of single ingot approx. 13 kg
production with electric induction furnace

PALLET

weight of single pallet approx. 11 MT
pallet sizes L 90 x D 90 x H 40 cm

CASTING

weight of single casting approx. 2.2 MT
Certificate of analysis for each single casting

TRACEABILITY

Every single batch is fully tracked
thanks to our internal management program

CERTIFICATES

We plan and monitor each individual operation and support process. For this reason, we have held the **ISO 9001 quality management system certificate** since 1995.

Our production originates from the **metal recovery activity** and we have held the **IEA - Integrated Environmental Authorisation - (IPPC - Intergovernmental Panel on Climate Change)** since 2006.

We devote time and attention to protecting the **environment**. Thanks to these measures we have been **ISO 14001** certified since 2004.

LABORATORY

Internal control

Through:

- portable X-ray device for classification of the incoming raw material
- X-ray spectrometer and optical emission quantometer for testing the analytical composition of each casting

Certificate 3.1

In accordance with analytical specifications, the composition of the ingots is attested by means of certificate of analysis for each casting.

Development

Continuous improvement of methods of analysis and research on the incoming and outgoing materials.

ENVIRONMENTAL RESPONSIBILITY

“Metal recovery is fully eco-sustainable”

Fausto Guizzi

CEO of RMG

The recovery of bronze and aluminium bronze scrap allows us to use **only 5% virgin raw material**, avoiding the dispersion of 5000 MT including waste and EOW into the environment.

The constant maintenance and improvement of **environmental protection** systems also guarantee the balance and **well-being of the community**.

WHY RMG?

- **Flexibility**
Our alloys can be produced according to the specifications agreed upon with the customer
- **Availability**
We offer technical advice and support to the customer and, where necessary, we evaluate the option to supply a test batch
- **Reliability**
We offer top-notch customer support, guaranteeing compliance with the contractual terms and timely delivery, with an average order fulfilment of 10 days
- **Innovation**
We are constantly updated on industry trends and the new technologies available
